What is this?

“Vibe coding” means building software by talking to AI in natural language — no traditional programming required.

Before you can start, your PC needs several development tools installed, which takes 30–60 minutes manually and is easy to get wrong.

Just run `dev-one-click-setting-kit.bat` **once** and it will:

- Automatically find and install all required tools
- Skip or upgrade tools that are already installed
- Save an installation report when done

This file is **Windows only**. It does not work on macOS or Linux.

What tools get installed?

Core tools (via winget)

Level	Tool	Purpose
Beginner	Git	Essential for saving and sharing code
Beginner	Python 3	Core language for AI/ML development
Beginner	Node.js LTS	Required for web dev (Next.js, React, etc.)
Beginner	VS Code	Code editor
Beginner	Windows Terminal	Better terminal experience
Intermediate	GitHub CLI	GitHub command-line operations
Intermediate	PowerShell 7	Enhanced scripting environment
Intermediate	pnpm	Fast package manager
Intermediate	Ollama	Run local AI models
Intermediate	Bun	Ultra-fast JS runtime
Advanced	Java 21 LTS	Enterprise backend development

Level	Tool	Purpose
Advanced	Flutter	Mobile/desktop app development
Advanced	Go	High-performance server development
Advanced	Rust	Systems/security programming
New	Ruby	Web backend (Rails)
New	PHP	Web backend (Laravel)
New	GitHub LFS	Large file storage
New	Stripe CLI	Payment development tool

Optional npm packages

Vercel · Supabase · Stripe CLI · Railway CLI · Prisma · Claude CLI · Uploadthing

npm packages can be selected one by one with **Y/N** during installation.

How to use — Complete beginner guide

Requirements

- Windows 10 (21H2 or later) or Windows 11
- Internet connection
- `dev-one-click-setting-kit.bat` file

Steps

Step 1 — Download the file

Click **Releases** on the top right of this page

→ Under **Assets**, click `dev-one-click-setting-kit.bat` to save it

Alternatively: click `<> Code` → **Download ZIP** → extract the ZIP file.

Step 2 — Run as Administrator

Right-click on `dev-one-click-setting-kit.bat`

→ Select **“Run as administrator”**

 Without administrator rights, some tools may not install correctly.

Step 3 — Choose from the menu

A black terminal window will open with a menu.

Type a number and press **Enter**.

```
=====
Vibe Coder Environment Kit | AI Dev Environment Setup
=====

[1] Beginner Install   First-timers      (5 tools, ~7 min)
[2] Intermediate      After Beginner   (11 tools, ~15 min)
[3] Advanced          Multi-language dev (16 tools, ~35 min)
[4] New Tools         Extra tools      (18 tools, ~45 min)
-----
[A] Easiest Recommended Start here! (5 basics + AI guide)
[5] Select Individual  Pick what you need
[6] Safe Update        Update tools to stable (LTS) versions
[7] Remove             Remove individual/all tools
[8] Direct Download    Official site URLs (if winget fails)
[9] Check Installation Show O/X + version info
[0] Exit
```

If you're new, type `1` and press Enter.

Step 4 — Handle already-installed tools

Before installation starts, if any tools are already installed, you'll be asked:

How to handle already-installed tools:

[1] Skip (keep current version)

[2] Upgrade (update to latest)

[3] Remove (uninstall only)

Choice (default=1):

Just press **Enter** to automatically select **[1] Skip**.

Step 5 — Check results

After installation, two files are automatically saved in the same folder, and total elapsed time is shown on screen.

File	Contents
install-report-DATE.txt	Success/fail/skip summary
install-log-DATE.txt	Detailed installation log

Installation levels

Level	Who it's for	Total tools	Est. time
[1] Beginner	First-time vibe coders	5	~7 min
[2] Intermediate	After completing Beginner level	11	~15 min
[3] Advanced	Multi-language development	16	~35 min
[4] New	Specialized tools (Ruby, PHP, etc.)	18	~45 min

If you're just starting out, **[1] Beginner** level is all you need.

Direct Download Menu ([8])

When winget fails, select **[8]** from the main menu to see official download site URLs.
Type a number or **Ctrl+click** a URL to open it in your browser instantly.

```
[Direct Download Links]
Type a number OR Ctrl+click a URL to open it in your browser.

```

Ctrl+click: In the terminal, hold Ctrl and click the URL with your mouse to open the browser.

Key features

Feature	Description
One-click install	Automatically installs tools via Windows' built-in winget
Already-installed detection	Choose to skip / upgrade / remove
Auto-retry	Automatically retries once on failure
Portable	Works regardless of BAT file location or filename
Install report	Saves results as a text file automatically
Elapsed time display	Shows total time taken after installation completes
PATH verification	Checks environment variable registration after install

Feature	Description
CLI cheat sheet	Shows version check commands after completion
Individual selection	Pick specific tools from [1]–[18]
npm Y/N selection	Choose Vercel/Supabase/etc. one by one
Safe update menu	Update tools to stable (LTS) versions (preview before applying)
Direct Download menu	24 official URLs — open with Ctrl+click
Remove menu	Individual or full removal support
Disk space check	Warns and pauses if less than 3 GB free
Easiest Recommended [A]	Installs 5 basics + opens AI tool (Cursor·Claude Desktop) download pages
Safe (LTS) baseline	Stable (not beta) versions; Node·Java use LTS
Colored results	Done=green, Failed=red — at a glance (Windows 10+)
First-run guide	Welcome / reassurance / SmartScreen warning tips for newcomers

Folder structure

```
dev-one-click-setting-kit.bat  ← Main executable (this is all you need)
README.md                    ← Korean guide
README_EN.md                 ← English guide (this file)
CHANGELOG.md                 ← Version history
LICENSE                      ← License
PRD/                         ← Development planning docs (reference only)
upgrade_v1.1.0.py            ← v1.1.0 patch record script
```

`install-report-*.txt` and `install-log-*.txt` are generated automatically after running.
`.bak` and log files are listed in `.gitignore` and will not be uploaded to GitHub.

FAQ

Q. Installation fails even with administrator rights?

Windows Defender or antivirus software may be blocking the BAT file.
Add the file to your antivirus whitelist, or temporarily disable real-time protection and try again.

Q. The terminal window closed unexpectedly during installation?

Open `install-log-DATE.txt` in the same folder and check the last few lines for error details.

Q. “winget not found” error?

Install “**App Installer**” from the Microsoft Store.
Or go to Windows Settings → Apps → Optional Features → App Installer.

Q. I only want to install specific tools?

Choose **[5] Select Individual Tools** from the main menu to pick tools one by one.

Q. A tool won't install via winget?

Select **[8] Direct Download** from the main menu.
Type a number or **Ctrl+click** a URL to open the official download page in your browser.

Q. How do I update tools to the latest version?

Use **[6] Safe Update** from the main menu,
or choose **[2] Upgrade** when prompted during a level install.

Q. Is it safe to run again on a PC that's already set up?

Yes. The default **Skip** mode means already-installed tools won't be touched.

Important notes

- **Windows only** — Does not work on macOS or Linux.
 - **Internet required** — winget downloads packages from the internet.
 - **Corporate restrictions** — Some enterprise PCs may have winget blocked by IT policy.
 - **Disk space** — Full installation requires about 5 GB free. A warning appears if less than 3 GB is available.
 - **Log files** — `install-log-*.txt` contains no sensitive data, but verify before sharing.
 - **Safe to re-run** — Running again on a configured PC will not break existing installations.
